A. Count and normalized points (14)

Solid bars: conditional, independence unverified. Triangles: test adjustments, no intervals.

B. K11 training-described simulation results (10)

Dashed purple bars: rounding ranges for FPR; unknown attack weights plus rounding for TPR.
These are identification ranges, not confidence intervals. * K10 TPR requires extra assumptions.
All 24 descriptive points retained; K03 and K11 hypothetical intervals are supplementary only.
